

With AXEL Health, Centre François Baclesse optimizes the management and preventive management of its medical

As part of the French health ministry's "Hospitals 2007" programme, which emphasizes respect for regulations and patient safety, **Centre François Baclesse** – cancer prevention centre for the Lower Normandy region – has once again shown **confidence in Dimo Gestion by choosing its AXEL Health software solution.** From precise event traceability to managing AFSSAPS (health product safety) alerts, via preventive management, AXEL Health expertly manages **every aspect – be it regulatory, technical and economic – of the follow-up and maintenance of Centre François Baclesse's 300 items of medical devices vigilance (MDV) equipment.**

Today, Centre François Baclesse's maintenance department, together with AXEL Health, has completely **eradicated administrative tasks,** by eliminating paper and automating processes, so that it can **dedicate more time to quality control, preventive management and cost analyses for MDV equipment.**

Now, Centre François Baclesse can comply with "Hospitals 2007" reforms while making gains in terms of productivity.

Centre François Baclesse, equipped with the latest innovations in cancer prevention, felt it was time for a total rethink of how their MDV equipment is managed, with a view to automation and fine-tuning.

Now, Centre François Baclesse can comply with "Hospitals 2007" reforms while making gains in terms of productivity.

Centre François Baclesse, equipped with the latest innovations in cancer prevention, felt it was time for a total rethink of how their MDV equipment is managed, with a view to automation and fine-tuning. This 250-bed establishment was looking for a CMMS solution specifically dedicated to this equipment that would enable them to **constantly check performance and automatically manage AFSSAPS alerts**, while also providing a cost-analysis facility.

The Centre François Baclesse project aimed to guarantee **the highest quality and ensure meticulous preventive management of these sensitive items of equipment, in compliance with "Hospitals 2007" reform directives.**

After comparing the products on offer from different publishers, Centre François Baclesse settled on the AXEL Health solution, attracted by its **three key assets: its operational versatility, its open and 100% web-based architecture, and the value for money it offers.** Mr Morcel, Head of Maintenance at the Centre, said, "We have been using the same publisher's AXEL CMMS solution since 1994 and have experienced gains on the ground in terms of productivity, access to information, and log and intervention tracking. For us, the AXEL Health solution was the obvious choice, ensuring continuity and enabling us to optimize the management and preventive management of our MDV equipment."
